He left at the right time but was late due to unresponsive crosswalks and construction.

As long as I leave by 8 am I will be early

His early classmates alert him to the USC pedestrian app which gives alerts on delays.

I'm finally learning instead of thinking when I have to leave for class

He explores the app and discovers a planner that allows him to precisely chart his walk to class

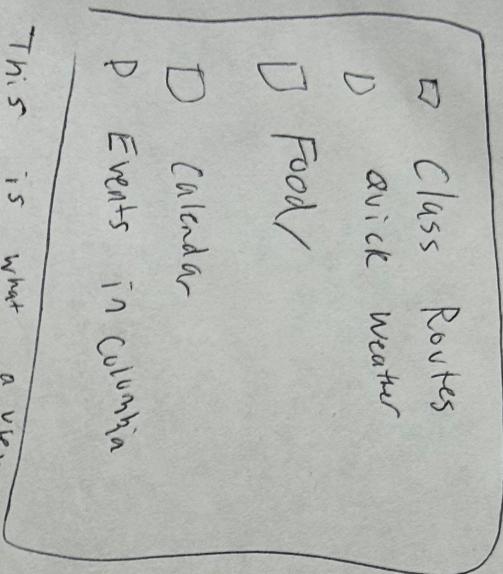

He can now anticipate long walk times and relieve stress. John now has time to do what he desires instead of wasting time traveling.

Notified of construction and faulty crosswalks, John was never late again.

App highlights optimal route factoring traffic, crosswalks, construction

If quick weather is clicked, a brief report shows whether it's going to rain.

If "Food" is clicked, it will bring up the food places that accept meal plan.

The calendar planner is a calendar to help students keep track of assignments and linkable to blackboard.
